

Introduction

TUIS, short for Terminal User Interface System is, as the name suggest, a UI System for your Terminal entirely made in C#.

With built-in timed events and an Input system, TUIS is made to be easy to use, light and highly customizable.

This is an example of what is possible with TUIS. (more to come)

Namespace TUIS

Classes

[DynamicTerminal](#)

[Terminal](#)

A Terminal is the main object of this TUI system. It will hold each [Component](#) that will be drawn on the screen.
